Title: Software Engineer
Team: Engineering/Integrity
Location: Seattle, WA; Remote

Company Description

Alexandria Technologies is building a platform to make it easier for people to annotate the things they're reading or listening to – like books, audiobooks, or podcasts – so they can build out their own personalized library of insights. They will then have the opportunity to share their notes and thoughts in order to have deeper conversations on common topics. We aim to create a community knowledge network.

We are a mission-focused company. To that end, Alexandria Technologies is incorporated as a public benefit corporation – you can read our commitments [here](#) – and will be seeking to eventually become a [steward-owned company](#) to solidify our mission.

About the Role

This role provides the unique opportunity to help lay our technical and visual foundation. The Software Engineer will play a pivotal role in helping design and build the platform. This means working with leadership to help build and support the development of both the back-end and front-end of the platform.

As the platform and company grow, they'll be expected to take a leading role in helping build and shape the engineering and/or integrity department.

The ideal person for the role is someone with experience in building and/or maintaining SaaS, ecommerce, or social networking platforms; preferably all three. Additionally, they will also have experience building and managing teams. Regardless, this position requires strong people skills and the ability to work collaboratively.

Job Qualifications

- Know how to write well-tested, maintainable code
- Familiarity with – or open to learning about – data architecture, visual design, & cybersecurity
- Ability to identify, prioritize, and execute on cross-cutting problems that impact the organization, collaborating across multiple teams as needed to find the optimal strategy and deliver a solution
- Aware of or willing to learn about recruiting/hiring strategies for high performing engineering teams
- Excellent communication skills, leads with kindness & curiosity, always looking to improve

Nice-to-haves

- A love of books, audiobooks, and/or podcasts
- An avid note-taker
- A humane/responsible tech certificate/degree
